Recent claims

regarding convergence and divergence between land change science and political ecology as approaches to the study of human-environment relationships and sustainability science are examined and analyzed in this innovative volume. Comprised of 11 commissioned chapters as well as introductory and concluding/synthesis chapters, it advances the two fields by proposing new conceptual and methodological approaches toward integrating land change science and political ecology. The book also identifies areas of fundamental difference and disagreement between fields. These theoretical

contributions will help a generation of young researchers refine their research approaches and will advance a debate among established scholars in geography, land-use studies, and sustainability science that has been developing since the early 2000s. At an empirical level, case studies focusing on sustainable development are included from Africa, Central and South America, and Southeast Asia. The specific topics addressed include tropical deforestation, swidden agriculture, mangrove forests, gender, and household issues.

Huge numbers are hard to comprehend.

This book explains quantities in terms children can understand. For example, one million dollars could buy two full pizzas a day for more than sixty-eight years.

Dr. Seuss's classic character the Lorax has delighted children for decades while passing along a powerful message about environmental responsibility. The book's young readers, and their parents, would likely be surprised by the emergence of a new character, Truax, a kindly logger created by a longtime employee of the wood products industry, who, not surprisingly, has a far different viewpoint to share. Yet the Truax

character, and the book of the same name, is just one example of a growing genre of conservative-themed narratives for young readers spawned by the continuing strength of the American political right. Highlighting the works of William Bennett, Lynne Cheney, Bill O'Reilly, and others, Michelle Ann Abate brings together such diverse fields as cultural studies, literary criticism, political science, childhood studies, brand marketing, and the cult of celebrity. Raising Your Kids Right dispels lingering societal attitudes that narratives for young readers are unworthy of serious political study by examining a variety of texts that

offer information, ideology, and even instructions on how to raise kids right, not just figuratively but politically.

From the author of the #1 New York Times bestseller *She Persisted* comes a beautiful book about

the animals who share our planet--and what we can do to help them survive. Did you know that blue whales are the largest animals in the world? Or that sea otters wash their paws after every meal? The world is filled with millions of animal species, and all of them are unique and special. Many are on the path to extinction. In this book, Chelsea Clinton introduces young readers to a selection of endangered animals, sharing what makes them special, and also what threatens them. Taking readers through the course of a day, *Don't Let Them Disappear* talks about rhinos, tigers, whales, pandas and more, and provides helpful tips on what we all can do to help prevent these

animals from disappearing from our world entirely. With warm and engaging art by Gianna Marino, this book is the perfect read for animal-lovers and anyone who cares about our planet. Exploring image and imagination in conjunction with natural environments, the animal, and the human, this collection of essays turns the ecocritical and ecompositional gaze

upon comic studies. The comic form has a long tradition of representing environmental rhetoric. Through discussions of comics including *A.D.: New Orleans After the Deluge*, *We3*, *Concrete*, and *Black Orchid*, these essays bring the rich work of ecological criticism into dialogue with the multi-faceted landscape of comics, graphic novels, web-comics, cartoons, and animation. The contributors ask not only how nature and environment are portrayed in these texts but also how these textual forms inform how we come to know nature and environment--or what we understand those terms to represent. Interdisciplinary in approach, this

collection welcomes diverse approaches that integrate not only ecocriticism and comics studies, but animal studies, posthumanism, ecofeminism, queer ecology, semiotics, visual rhetoric and communication, ecoseeing, image-text studies, space and spatial theories, writing studies, media ecology, ecomedia, and other methodological approaches.

The hummingbird parable, with origins in the Quechuan people of South America, has become a talisman for environmentalists and activists who are committed to making meaningful change in the world. In this simple yet powerful

story, the determined hummingbird does everything she can to put out a raging fire that threatens her forest home. The hummingbird--symbol of wisdom and courage--demonstrates that doing something is better than doing nothing at all. In this revised edition of the best-selling book, the parable is supplemented by an informative fact page about hummingbirds and evocative artwork by internationally renowned artist Michael Nicoll Yahgulanaas. Yahgulanaas's distinct and lively Haida Manga style complements the optimistic tale that encourages everyone to take responsibility for the planet.
