<b>Words and Their Meanings</b> Springer Nature <p>"This killer is murdering members of a dubious religious sect, the New Pantheon, and leaving a mysterious figure eight drawn on their corpses. Meanwhile, Sebastian Chrest-Jones, a noted professor of human migrations, clandestinely writing a novel about the Byzantine princess-historian Anna Comnena, disappears on a quest to learn more about an ancestor who roamed across Europe to Byzantium during the First Crusade. Kristeva's recurring characters, detective Northrop Rilsky and the French journalist Stephanie Delacour, step in and desperately try to piece together the two-part mystery in the midst of their unexpected love affair."</p> <b>Introduction to the Grammar of the Romance Languages</b> Wiley-Blackwell <p>What does it take for a volcanic eruption to really shake the world? Did volcanic eruptions extinguish the dinosaurs, or help humans to evolve, only to decimate their populations with a super-eruption 73,000 years ago? Did they contribute to the ebb and flow of ancient empires, the French Revolution and the rise of fascism in Europe in the 19th century? These are some of the claims made for volcanic cataclysm. Volcanologist Clive Oppenheimer explores rich geological, historical, archaeological and palaeoenvironmental records (such as ice cores and tree rings) to tell the stories behind some of the greatest volcanic events of the past quarter of a billion years. He shows how a forensic approach to volcanology reveals the richness and complexity behind cause and effect, and argues that important lessons for future catastrophe risk management can be drawn from understanding events that took place even at the dawn of human origins.</p> <b>Amsterdamer Beiträge Zur Älteren Germanistik</b> University of South Bohemia <p>This volume explores the varieties of relationships formed between science and civil society, at both the conceptual and institutional levels, since the late seventeenth century. It brings together general historians and historians of science with different national perspectives to confront the various ways sin which science and civil society have shaped one another in different times and places. How, when, and why did science become intertwined in the network of voluntary associations, professional groups and other institutions we understand as comprising "civil society"? How has science affected the ideology of civil society and thus the legitimacy of political authority in historical contexts as different as late eighteenth-century America, mid nineteenth-century Germany, and early twentieth-century China? How have scientists made use of the ideological links between science and civil political discourse to further their own professional ends? In contrast to much recent writing on civil society, this volume does not aim at making normative pronouncements about the role of civil society in promoting democratic polities, nor does it attempt to weigh the role of science in democracy. Instead, the essays examine how the fruitful interplay of beliefs concerning science and civil society has worked to legitimize the institutional forms of civil society and naturalize its ideologies, while at the same time giving to science its overwhelmingly powerful role in public life.</p> <b>Geoheritage and Geotourism</b> Boydell & Brewer <p>This book constitutes the refereed proceedings of the Third International Conference on Computational and Corpus-Based Phraseology, Europhras 2019, held in Malaga, Spain, in September 2019. The 31 full papers presented in this book were carefully reviewed and selected from 116 submissions. The papers in this volume cover a number of topics including general corpus-based approaches to phraseology, phraseology in translation and cross-linguistic studies, phraseology in language teaching and learning, phraseology in specialized languages, phraseology in lexicography, cognitive approaches to phraseology, the computational treatment of multiword expressions, and the development, annotation, and exploitation of corpora for phraseological</p>

*The Syntax of Italian Dialects* Hackett Publishing

Liberating Literature is, primarily, a bold and revealing book about feminist writers, readers, and texts. But is is also much more than that. Within this volume Maria Lauret manages to look with fresh vision at the American Civil Rights movement of the 1960s; socialist women's writing of the 1930s; the emergence of the New Left; and the second wave women's movement and its cultural practices. Lauret's historicisation of feminist political writing allows for a new definition of the genre, and enables her to illuminate the profound influence and importance of African-American women's writing. Well-grounded historically and theoretically, Liberating Literature speaks about and to a political and cultural tradition, and offers stunning new readings of both familiar and neglected novels within the feminist canon. Reader and students of feminist fiction cannot afford to be without this major new work.

This book looks at current research and future directions in e-lexicography. Online dictionaries and reference tools are increasingly prevalent in a digitized and internet-led era in language study that has embraced computational linguistics. This book responds with theoretical and practical analysis of key topics, from a global range of contributors. Since COBUILD in the 1980s, lexicographers have found it essential to engage with and utilize electronic computational tools. Internet dictionaries, online reference tools and even search engine optimization demand a knowledge of electronic lexicography and force a reassessment of the field. This volume looks at, amongst other topics:

- Polyfunctional versus monofunctional dictionary tools
- Developing theories of lexicography for electronic mediums
- Distinguishing between the database and the dictionary
- Online dictionaries not as data repositories but as sophisticated search engines

This volume will appeal to scholars in lexicography and to practicing lexicographers.

The Rhaeto-Romance languages have been known as such to the linguistic community since the pioneering studies of Ascoli and Gartner over a century ago. There has never been a community of RR speakers based on a common history or polity and the various dialects are mutually unintelligible, but a unity, based on a number of common features, has been advanced. This book is the first general description of the Rhaeto-Romance languages to be written in English. It provides a critical examination of the phonology, morphology, lexicon, and syntax of the modern Rhaeto-Romance dialects within the broader perspective of Romance comparative linguistics.

Europe's engagement from the late sixteenth century onwards in scientific Earth science inquiry has generated numerous and varied collections of minerals, rocks, and fossils, together with their associated archives, artworks and publications, forming a rich cultural geoheritage held in major private and especially royal and aristocratic collections, museums, universities, archives and libraries. The mines, quarries, geological structures, landforms, minerals, rocks and fossils - or geodiversity - that underpin these collections populate past and present-day Earth science literature. However, for too long their scientific, historic and cultural significance was not universally recognised and generally they were not accorded adequate resources and protection - or geoconservation. Hence, geotourism was developed in the 1990s to raise public awareness of Europe's geoheritage and geodiversity and to promote itsgeoconservation; the volume's theoretical essays and case studies examine these four core geoelements and provide a timely introduction for anyone interested in natural history museums, countryside management, and landscape-basedtourism. Dr Thomas A. Hose is an Honorary Research Associate in the School of Earth Sciences, University of Bristol. He has pioneered the recognition of and research into geotourism, and is the author of the world's first doctoral thesis on the subject. Contributors: Kevin Crawford, Peter Davis, John E. Gordon. *Theory and Practice of Specialised Online Dictionaries* Oxford University Press

This volume collects original theoretical work on the syntax and morphology of Italian and a wide range of Italian dialects. It contains contributions by such leading figures as Cecilia Poletto, Guglielmo Cinque, and Richard Kayne, and examines topics such as the syntax of "ne", the internal structure of personal pronouns, the syntax/morphology interface, and functional projections at the clausal level.

This four-volume comparative grammar of the Slavonic languages (originally published 1852-74) was among Franz Miklosich's most influential works.

*European Geoparks* Springer

The book contains a state-of-the-art summary of the theoretical discussions within the field of lexicography during the last decades. On this basis it presents and argues for a new general theory, called the function theory. It goes on to develop this theory in one single field, i.e. learners lexicography where it both formulates the basic elements of a general theory for learners' dictionaries as well as a number of specific theories for special subfields such as selection, meaning, semantic relations, morphology, syntactic properties and word combinations. It contains a big number of examples extracted from existing dictionaries which are discussed from the point of view of the theories formulated.

**Lexicography in the Borderland between Knowledge and Non-Knowledge** Columbia University Press  
This important and insightful book provides, for the first time, a broad presentation of ongoing research into public participation in landscape conservation, management and planning, following the 2000 European Landscape Convention which came into force in 2004. The book examines both the theory of participation and what lessons can be learnt from specific European examples. It explores in what manner and to what extent the provisions for participation in the European Landscape Convention have been followed up and implemented. It also presents and compares different experiences of participation in selected countries from northern, southern, eastern and western Europe, and provides a critical examination of public participation in practice. However, while the book's focus is necessarily on Europe, many of the conclusions drawn are of global relevance. The book provides a valuable reference for researchers and advanced students in landscape policies and management, as well as for professionals and others interested in land-use planning and environmental management.

Anna O'Mally is a born writer—gifted, perceptive, headed for the stars. Or she was, until the tragic death of her uncle Joe. He was barely older than Anna herself, and she worshipped the ground he walked on. Best of all, Anna got to live in the glow of knowing that she was the most important person in his world, too. Anna has promised everyone—her shrink, her parents, her best friend—that Joe's one-year "deadaversary" will be the end of her period of mourning. But when a strange note suggests that her saintly uncle had deep secrets, Anna stumbles into a chain of events that changes everything she thought she knew about the past, the possibilities of love... and origami. **The Rhaeto-Romance Languages** Rodopi

Multiword expressions (MWEs) are a challenge for both the natural language applications and the linguistic theory because they often defy the application of the machinery developed for free combinations where the default is that the meaning of an utterance can be predicted from its structure. There is a rich body of primarily descriptive work on MWEs for many European languages but comparative work is little. The volume brings together MWE experts to explore the benefits of a multilingual perspective on MWEs. The ten contributions in this volume look at MWEs in Bulgarian, English, French, German, Maori, Modern Greek, Romanian, Serbian, and Spanish. They discuss prominent issues in MWE research such as classification of MWEs, their formal grammatical modeling, and the description of individual MWE types from the point of view of different theoretical frameworks, such as Dependency Grammar, Generative Grammar, Head-driven Phrase Structure Grammar, Lexical Functional Grammar, Lexicon Grammar.

**The Routledge Handbook of Lexicography** John Benjamins Publishing Company

By creating certain marks on paper, or by making certain sounds-breathing past a moving tongue- or by articulation of hands and bodies, language users can give expression to their mental lives. With language we command, assert, query, emote, insult, and inspire. Language has meaning. This fact can be quite mystifying, yet a science of linguistic meaning-semantics-has emerged at the intersection of a variety of disciplines: philosophy, linguistics, computer science, and psychology. Semantics is the study of meaning. But what exactly is "meaning"? What is the exact target of

semantic theory? Much of the early work in natural language semantics was accompanied by extensive reflection on the aims of semantic theory, and the form a theory must take to meet those aims. But this meta-theoretical reflection has not kept pace with recent theoretical innovations. This volume re-addresses these questions concerning the foundations of natural language semantics in light of the current state-of-the-art in semantic theorising.

**Corpus Pragmatics** Oxford University Press

This book investigates one concrete compounding pattern in present-day Italian within a larger overview of Italian compounding. Various accounts and classifications of Noun + Noun combinations in Italian are reviewed, with special focus on the status of the lexical integrity hypothesis. The author sets out to propose an integrated approach to the Noun + Noun compounding pattern, rigorously based on large representative data sets that were extracted from the Italian web corpus ItWaC as both automatically and manually post-processed frequency lists. On the basis of such data, it is aimed to show the behaviour of various subtypes of Noun + Noun compounds. Starting out with the Bisetto-Scalise classification, the author carefully examines the status of coordinate compounds, ATAP compounds (i.e., the group comprising attributive and appositive structures) and subordinate compounds (comprising verbal-nexus and grounding compounds), discussing both theoretical and empirical implications of this classification scheme. Moreover, the original Bisetto-Scalise model is supplemented with further classification levels in order to capture specific compounding types such as relational (i.e. inherently trinomial) compounds. A major merit of the present study lies in the quantitative dimension of the data it deals with. In light of this data, the author emphasizes the gradient nature of the traditional dichotomy between syntax and compounding. The book will thus appeal not only to the linguists interested specifically in Italian word-formation, but also to a larger community of scholars who seek a more general view of the word-formation phenomena.
